

EDSPRO6-E4  
PRO AUDIO MIDRANGE  
LOUD • PRO • VALUE

The Street series just got an update.

The all-new EDGE EDSPRO 6” speakers offer a new, elite level of price to performance sharing. With many of the features and engineering as its big brothers in the EDX & EDU series, the new street series is set to impress.

Featuring our new “Magnus cone” for less deformation under high stress, poly-cotton spiders OFC high power voice coils and a dual roll cloth surround. This speaker produces a full-range sound with a frequency response from 90Hz to 20kHz, the EDSPRO6 also outputs a high SPL over an extremely large frequency range. The EDGE EDS speakers are packed with features that allow them to reproduce a PRO level sound with minimal effort.

Model	EDSPRO6-E4
Type	Midrange
Speaker Size	6.5” (167mm)
RMS Power	200W
Peak Power	400W
Sensitivity	96dB
Frequency Response	90Hz - 20kHz
Impedance	4Ω
Mounting Depth	2.6” (66mm)
Mounting Diameter	5.7” (145mm)

BRAND NEW TECHNOLOGY - “Golf ball” design cone which increases rigidity and strength of the paper cone with the added benefit of a small increase in cone area, all resulting in extra output.

WIDEBAND RESPONSE - Featuring an extreme wideband frequency response that reaches into the territory of the response of tweeters, allowing these speakers to be used either without tweeters, or with fewer tweeters in certain pro audio applications. If preferred, this driver can still be used as a traditional midrange driver with the appropriate crossovers.

HIGH PERFORMANCE - Built to perform, all of the engineered features in the EDSPRO6 are produced to be market-beating.

BEST VALUE - The EDSPRO6 brings affordable performance with carefully considered parts and designs.

MAGNUS CONE

The new EDSPRO6 features an all new “Golf ball” design paper cone which increases rigidity and strength of the paper cone.

FEMM MOTOR

Powerful Y3 ferrite magnet provides extreme motor force for high SPL applications.

SPADE TERMINAL

Built in spade terminal for easy and neat and secure connections to the speaker terminals.

CLOTH SURROUND

Dual roll, treated cloth surround to help improve the lower end of the speakers midrange response. By allowing for a more dynamic but controlled excursion.

TORSION BASKET

Angular torsion basket for increased rigidity and support for the large moving motor parts of the speaker.

WIDEBAND RESPONSE

These speakers feature a wideband frequency response, meaning the driver can play much higher than a traditional midrange driver.
