

ZX210PBS - 2x10" Passive box 2Ohm

The new PBS boxes is made with maximum sub performance in a small format. This is not a easy task so we used some really going back to basics tricks to reach the performance goals. The boxes have two subs but one of them are a passive radiator. The radiator makes the difference with helping to extend the lower bass frequencies and help the normal sub perform much better in the closed box. We also made it down firing to make use of the extra gain you get with this kind of "corner" loading. The box has a single 2Ohm coil to fit perfect for smaller mono blocks like the ZXM500.1 that will fit this box perfectly. So in short small box with loads of real low subwoofer performance that is missing in todays cars!

Technical

Dual 10" ZXT Subwoofers
 One of the subs are a passive radiator
 Full MDF Box
 2 Ohm at terminal
 Push terminal
 350W RMS
 700W MAX
 Made for down firing install
 Mounting hardware included
 650x320x140mm

Works perfectly with ZXM5001
